WELCOME TO MINI OPERATING SYSTEM 9

MINI has made a digital leap forward with enhanced features and new technology. The MINI Operating System 9 is equipped with QuickList, a touch-optimized design offering the user a modern and efficient experience. Widgets and shortcuts can be saved in this stacked format with the ability to swipe to change the view and category. Design, customization, improved cloud-based navigation, enhanced intelligence, MINI Digital Key Plus, MINI Connected Store and new entertainment functionalities are just some of the functions which strengthen the digital experience. Please note some of the features below may need an active MINI Connected Plus subscription. For more information visit MINIUSA.com/MINIConnected.

MINI OPERATING SYSTEM 9

MODERN AND EASY

The new main display is segmented into three parts and serves as the starting point. The top portion contains relevant driving information such as speed, fuel level or range. The midportion contains the widgets for navigation, entertainment, MINI Intelligent Personal Assistant and more. These are movable by swiping sideways. The lower portion contains 6-dot symbols for calling up the Apps menu. These menus include Climate, Media, Navigation, Phone etc. The optimized design makes direct access to key features easier for the driver and front seat passenger. The interface includes an elegant design with stacked widgets to reduce the steps needed to access applications.

CUSTOMIZE YOUR EXPERIENCE

The layout offers a variety of widgets which allows the user the option to create personal shortcuts fit for their needs. Along with the new interface, the operating system may include both in-car gaming via AirConsole and video streaming when parked. Players may use their compatible smartphones as a controller to begin the fun. The fun continues with MINI Experience Modes which combine a variety of different settings to create the most functional and emotional user experience possible for the respective driving situation.

INTELLIGENT PERSONAL ASSISTANT

MINI's all new Intelligent Personal Assistant connects the vehicle to the driver in a seamless interaction. The advanced technology can recognize, evaluate and intelligently implement many requests by voice command. Activate by saying, "Hey MINI" or by pressing the voice input button on the multifunction steering wheel. Choose between a MINI visual avatar or "Spike", the dog visual avatar.

MINI OPERATING SYSTEM 9

APPLE CARPLAY/ANDROID AUTO

With Operating System 9, Apple CarPlay and Android Auto are now included as standard. Wirelessly connect to your favorite compatible smartphone apps. In addition to the display on the MINI Interaction Unit, relevant information can also be shown in the optional head-up display.

NAVIGATION

All aboard! With the new navigation system, the map is sent directly to the vehicle via online data streaming, so you can stay up-to-date with road conditions. For an even better navigation experience, destination entry is simplified by quick search buttons below the destination entry field. This means that the most important and frequently used functions can be accessed quickly. Smart video guiding is also available for an optimized driving experience. For electric vehicles, a route optimized for charging is calculated immediately after the destination is entered, taking charging stops and charging time into account. A circle on the map shows the approximate electric range of the vehicle.

PERSONALIZATION WITH MINI ID

Connectivity the MINI way. Across all MINI digital touchpoints a standard MINI ID is used to securely access the account. The customer's personalized settings are remembered across MINI vehicles and there is easy integration between your vehicle, MINI Connected Store, the MINI App and My MINI Garage. Use of personalized greeting, saved map destinations and remote functions among other functions are enabled with the MINI ID.

MINI OPERATING SYSTEM 9

MINI REMOTE SOFTWARE UPGRADE

With Operating System 9, Remote Software Upgrades may be available for quality improvements and may take place several times a year. Depending on the vehicle model and equipment, updates may include additional new functions or improvements.

MINI EXPERIENCE MODES

The individual MINI Experience Modes, such as Timeless, Efficient and Vivid combine a variety of different settings to create the most functional and emotional user experience possible for the respective driving situation.

The MINI Experience Modes can be used to customize functions in the following areas:

- Display
- Interior lighting
- Driving characteristics
- Climate control
- Seats
